

Inflation Unemployment Correlation

2000s Data Analysis	
SUMMARY OUTPUT	
Regression Statistics	
Multiple R	-0.86
R Square	0.74
Adjusted R Square	0.71
Standard Error	0.79
Observations	10

What type of relationship exists for the decade?

Is this a strong, medium or weak correlation?

Is this different from what we observed in the 80s and 90s data?

What explains the negative relationship for the 2000s?

Does the recent data support the Phillips curve hypothesis?
